

ASHRAE Guideline 0: The Commissioning Process

Gerald J. Kettler, PE
AIR Engineering and Testing, Inc.

Synopsis

The ASHRAE Guideline O, The Commissioning Process is being published in Spring 2005. It is also being published by the National Institute of Building Sciences (NIBS) as the basis for many other building specialty commissioning documents, thus creating a total building commissioning system. This document is the result of many years of effort by commissioning providers and users to provide detailed description of the standard and preferred procedures for commissioning. It is quickly being adopted as the base document for commissioning by many organizations. This roundtable will discuss the contents of the new guideline and its relationship with previous ASHRAE Guideline 1 on The HVAC Commissioning Process and follow on guidelines.
