

## ***Dome-Tech Commissioning Services***

Dome-Tech Commissioning Services is the leading provider of quality assurance services for building HVAC, lighting, envelope and site utility systems in the North East. With our unique combination of field and design experience, we provide complete in-house testing and verification services to guarantee unbiased results. With over 10 years of commissioning experience, Dome-Tech has performed more commissioning projects under the NYSERDA and the NJ SmartStart Buildings program than any other firm, and was the only firm selected by PSE&G to perform “pilot” commissioning projects at two major pharmaceutical firms in New Jersey. Dome-Tech is also the leading commissioning provider for the NJ School Construction Corporation (NJSCC) and is in the process of commissioning over 50 K-12 school facilities, including schools from three Abbott regions.

Dome-Tech commissioning engineers have successfully completed formal commissioning training by the three most rigorous training programs in North America: those of the Building Commissioning Association, the University of Wisconsin Engineering Extension Service and ASHRAE. Many team members are also certified by the University of Wisconsin and the Building Commissioning Association as certified quality assurance professionals. Engineers are thoroughly knowledgeable in building operations and test, adjust and balance procedures for building systems. We maintain our own inventory of professional test and balance equipment that is kept constantly calibrated to NIST and NEBB standards. We also maintain an inventory of portable data logging modules and specialized data-loggers for air, water and electrical measurement and have extensive experience in their application.

Dome-Tech is extremely active with the U.S. Green Building Council’s LEED™ program and close to one third of our staff is LEED™ accredited. We’ve completed multiple LEED™ registered projects including the Mark Twain House, the first LEED™ Certified building in Connecticut. A nationally known author and speaker on commissioning, Dome-Tech’s Vice President of Operations is an ASHRAE Distinguished Lecturer for Commissioning, a USGBC LEED™ Faculty Member for Commissioning and an American Institute of Architects registered Continuing Education Services provider.

We provide commissioning services in complete compliance with national, state and local codes and programs. We provide Total Building Commissioning (TBCx) for new building construction, additions and renovation. Our services include ASHRAE Integrated Commissioning, LEED Certification Commissioning, Pharmaceutical Commissioning Prior to Validation, Start-up Commissioning, Utility System Commissioning, Construction Document Review, General Consulting Services and Rebate and Incentive Filing Support.
