

Strategic Building Solutions, LLC

Strategic Building Solutions, LLC (SBS) provides clients with managerial, technical and analytical support throughout the facilities planning, improvement and construction processes. Rarely can clients afford the requisite staff, time and expertise necessary to fully plan and manage building improvement efforts and commission the complex building systems. For that reason, SBS provides clients with expertise to supplement existing capacities to ensure facilities initiatives are professionally planned, managed and commissioned. Service categories include: 1) Strategic Planning for Facilities, 2) Owner's Representation/Program Management, and 3) Building Commissioning.

SBS's Commissioning Services are typically performed as an independent third party commissioning authority which provides the Owner with the greatest degree of objectivity possible. SBS is a Building Commissioning Association member with trained and certified commissioning professionals on staff. Commissioning experiences encompass both new buildings and existing buildings (Retro-Commissioning). A special emphasis and focus is placed on "Green" buildings with nearly all professionals holding the LEEDTM Accredited Professional certification. Building types commissioned include laboratories, academic buildings, data centers, residence halls, performing arts centers, museums, schools and office buildings.
