

COMMAND Commissioning, LLC. is a specialist consulting firm that addresses the needs of the facilities of the future. COMMAND Commissioning are systems designers specializing in commissioning of low voltage building monitoring and control systems such as security systems, building automation systems, fire alarm systems and the integration of these systems with one another and with other low voltage building systems such as vertical transportation, electrical metering and power distribution, chiller controls, vehicle license plate recognition, pedestrian tracking, lighting, and other computer based low voltage monitoring and control building systems.

The level of sophistication in today's facilities demands an integrated approach to the application of state-of-the-art technology designs. COMMAND Commissioning personnel have provided building systems commissioning for many projects around the world including the twin towers in Kuala Lumpur, which are presently the two tallest buildings in the world, Canary Wharf in London, England, which is a mixed-use development in the London docklands of approximately 14 million square feet, and various other facilities for Fortune 500 companies.

COMMAND Commissioning senior staff average over 20 years of experience in building systems consulting and commissioning. Our staff includes Certified Protection Professionals and registered Professional Engineers in the U.S., Canada, United Kingdom and Europe. Our personnel have a proven track record and provide the highest level of excellence possible in the field of low voltage building systems consulting.
