

Enovity is a dynamic energy engineering, building commissioning, sustainable design, and facility operations and maintenance company. We provide customer-driven energy and operational solutions for high performance buildings.

Our customers range across the public and private sectors and include the Federal GSA; state and local governments; energy utilities; and academic, medical, hospitality, retail, gaming, high-tech, commercial, and industrial clients.

Enovity is a technology-focused company, with capabilities and resources that include mechanical, electrical and building control engineers and facility management specialists. Key personnel have design, project management and facility operations experience.

Our commissioning services include new construction commissioning, including LEED™ NC Commissioning; building retro-commissioning, including LEED EB Commissioning; and monitoring-based (continuous) commissioning. We provide 3<sup>rd</sup> Party Independent Commissioning Authority services and can self-perform as Commissioning Agent with comprehensive equipment testing and performance validation.

Enovity is a licensed General Engineering and Electrical Contractor. Our construction services include construction administration, construction management, and design-build turn-key delivery of energy-driven facility improvements.

Enovity's head office is in San Francisco. We also maintain a San Francisco field office and an office in Phoenix, Arizona. Enovity is a member of the Building Commissioning Association. Please visit our website at [www.enovity.com](http://www.enovity.com) for more information and for current employment opportunities.
