

GUTTMANN & BLAEVOET has provided continuous engineering services to architects and building owners since 1956. Our mission is to provide mechanical/electrical engineering and consulting services with an emphasis on designing healthy and productive indoor environments-while preserving the outdoor environment-with creative, appropriate and cost effective solutions. With offices in San Francisco and Sacramento, California, our staff of 30 includes licensed mechanical and electrical engineers, designers, and CAD specialists.

SUSTAINABLE DESIGN is a core value in our firm. With 80 percent of our engineers LEED Accredited Professionals, we vigorously apply principles of sustainable design to our projects. Our in-house energy modeling and controls/commissioning services support our commitment to sustainable design and energy efficiency, bringing an in-depth understanding of systems engineering and whole building operations to our clients. Our projects have received regional and national awards for sustainable design, technology, and energy efficiency. We also aggressively utilize utility rebate and incentive programs such as PG&E's Savings By Design™ to obtain incentive dollars for our clients' energy investments. To date 26 projects qualified for \$1,045,303 in owner incentives.

COMMISSIONING has been incorporated into our services for over five years on a wide range of building types. Our extensive commissioning services includes: 3rd party commissioning, Supervision and facilitation of contractor-based commissioning, Specification and review of contractor-based commissioning, Post-occupancy and re-commissioning, Continuous commissioning, and Commissioning for LEED certification.
