

E-Mon, the manufacturer of E-Mon D-Mon® metering products and RightEnergy™ software provides customers with the tools needed to increase energy efficiency and reduce costs. E-Mon D-Mon submeters have led the electrical metering industry for over 25 years. They are the ideal solution for a variety of applications including tenant billing, common area management, departmental monitoring and demand analysis. Meters are installed beyond the traditional glass-covered utility meter to monitor specific areas of a facility or pieces of equipment. E-Mon D-Mon meters install with split-core current sensors, avoiding power interruptions during installation. When combined with RightEnergy energy intelligence software, building owners and managers achieve behind-the-scenes insight on their facility's flow and consumption of energy.
