

The National Environmental Balancing Bureau (NEBB) exhibit will feature NEBB technical publications and home study courses on: testing adjusting and balancing of environmental systems; cleanroom performance testing; sound and vibration measurement; and building systems commissioning. In addition, brochures and other literature with information concerning the NEBB certification programs and technical seminars will be available.

NEBB establishes and maintains industry standards, procedures and specifications for work in its various disciplines. Each discipline is anchored by a NEBB Procedural Standards that provides guidelines for work to be performed. NEBB has also created technical manuals, training materials, and seminars to enhance and support each discipline.

As an integral part of the NEBB program, NEBB certifies firms that meet certain criteria, ensuring strict conformance to its high standards and procedures. NEBB also establishes professional qualifications for the supervision and performance of work in its various disciplines.

The NEBB program affords building owners, architects, engineers and other agents a reliable basis for specifying work within the various disciplines of NEBB. Moreover, the program provides contractors highly competent in their field and promotes proper execution of projects by insuring compliance with NEBB standards and procedures.
